

HandPunch biometric readers.

**Take control of time and attendance,
and keep your costs in check.**

In the grocery business, frequent staff changes and multiple shift schedules can make maintaining accurate time and attendance records challenging. The Schlage HandPunch is a proven biometric solution for grocery stores. With labor costs being 38.5 cents of every food dollar spent, the Schlage HandPunch can help you significantly reduce your number one expense. The Schlage HandPunch can be installed at multiple locations in your store, delivering the most accurate and reliable time and attendance tracking no matter how large or small your staff.

HandPunch biometric readers ensure accurate time and attendance.

HandPunch, the reliable biometric.

Biometrics identify people by a unique human characteristic, such as their voice, a fingerprint or elements of the eye. The Schlage HandPunch uses the size and shape of a user's hand to identify the employee. The HandPunch provides additional benefits over other biometric technologies by using hand geometry to increase reliability and reduce privacy concerns. When the HandPunch is deployed properly payback can be realized in fewer than nine months.

- HandPunch accurately identifies users even if their hands are wet, dirty or injured.
- Consistent, accurate results are ensured because the HandPunch adapts its biometric template for an individual user over time. This means that the HandPunch "learns" to change as the user changes.
- Easy-to-use terminals are implemented globally and have one of the largest installation bases, with over 300,000 installed.
- Antimicrobial coating on the device inhibits the growth and spread of microbes and lasts the life of the HandPunch.

Save time and money, while ensuring accurate payroll.

Using biometrics to automate collection of time and attendance data can reduce buddy punching – where one employee punches in for another - manual data review and correction time, and payroll error. HandPunch keeps costs under control.

- Employees can only punch in for themselves, ensuring accurate records of time and attendance.
- No need for costly badges and cards that can be lost or damaged.
- Increase productivity by eliminating the need to manually review and collect information.
- Average return on investment occurs within nine months or less.

"The HandPunch readers proved to have a dramatically lower rate of false rejects. Their value grows as the number of users and transactions increases. At our supermarket, biometric hand readers were the only solution."

Hetzi Henam
Supermarkets, Israel

A proven solution in grocery.

The Schlage HandPunch has improved payroll management and streamlined time and attendance systems for grocery businesses of all sizes, both in the US and internationally.
